**Vacuum Barrier Corporation Sources Critical Subassembly from Scanning Devices, Inc.**

Vacuum Barrier builds Nitrogen Delivery Systems for nationally recognized bottling companies like Coca-Cola. Our systems are used on high speed bottling lines and are relied upon by our customers to deliver long term reliability. We only work with quality suppliers whose components strengthen our systems and meet the high expectations of our customers.

We first contracted with Scanning Devices in 1987 to design, develop and manufacture a critical electronic subassembly for our high end systems that would ensure fast and accurate dosing with precise timing on the production line. Their technical expertise and engineering skills were invaluable in developing a solution to meet our needs. They worked closely with us to understand our requirements and then designed, prototyped, tested and proved their component part in our systems. Since then we have relied upon Scanning Devices to manufacture this, and other component parts, for us. They have demonstrated their ability to meet our high standards.

As our needs, and the needs of our customers, have changed they have adapted their design and helped us to improve the overall performance of our systems. Their customer service and support is exceptional. We consider Scanning Devices to be one of our most valued suppliers.
